

Unlike other composite tanks that hide tired old bag technology in a plastic shell, the Flex-Lite FL composite tank uses the latest evolution of the field proven controlled action diaphragm design that Flexcon introduced in Well-Rite steel tanks in 1989.

Highly trained technicians oversee FL tank winding being done on Flexcon's state-of-the-art automated filament winder.

The Flex-Lite FL series' improved CAD-2 diaphragm design is stronger and won't crease and wear out like bag designs. It features a chlorine resistant 100% butyl diaphragm with a precision molded copolymer polypropylene lower water chamber for superior air and water separation.

This patented design allows each size tank to have a properly sized water chamber, matched to the drawdown performance of that tank. When it comes to performance and durability, the CAD-2 system cannot be beat.

So if you are looking for the proven performance of a Flexcon steel tank in a lightweight composite design, Flex-Lite FL is your strongest choice.

**FLEXCON FLEX-LITE.**

THE BENCHMARK FOR  
ALL OTHER COMPOSITE  
WELL TANKS.  
EQUALLY DURABLE TO OUR  
HIGH-END STEEL TANKS  
BUT WEIGHS 1/3 LESS.

[ INNOVATION ISN'T JUST WRAPPING FIBERGLASS AROUND OLD WELL TANK TECHNOLOGY. ]

**SUPER SIZED**  
Our larger tank sizes offer greater drawdown capacity.

Reinforced with durable, continuous strand fiberglass and sealed from the environment with weather resistant epoxy resin. Suitable for underground installation.

**CAD-2 CONTROLLED ACTION DIAPHRAGM MAXIMIZES DRAWDOWN & ELIMINATES ABRASION**

Rugged base engineered to withstand maximum loads and extreme environmental conditions.

Tough, injection molded, rigid PVC connection for easy installation and life-time performance.

[ WHY DO YOU NEED A WELL TANK? ]

Your well pump forces water to the surface. Without a well tank, the well pump would need to turn on every time you opened a faucet in order to maintain water pressure. Your well tank acts as a water storage container giving your well pump a much needed rest in between cycles. When air pressure inside the well tank decreases due to water usage, a pressure switch automatically activates telling the well pump to fill the tank. This assures an ample supply of well water will be on hand the next time you need it.
